## CH302 Spring 2007 Worksheet 6+

1. How many mL of a 0.1 M solution of $\mathrm{Ca}(\mathrm{OH})_{2}$ are required to neutralized 200 mL of a 0.2 M solution of $\mathrm{HNO}_{3}$ ?
2. The $\mathrm{pK}_{\mathrm{a}}$ of the amino acid aspartic acid is 4 . In a solution in which the $\mathrm{pH}=7.5$ what fraction of the aspartic acid is protonated?
A. $0.3 \%$
B. $7 \%$
C. $23.4 \%$
D. $72 \%$
E. $99.5 \%$
3. At what pH would the aspartic acid be $50 \%$ protonated?
4. The $\mathrm{K}_{\text {sp }}$ of magnesium hydroxide is $1.8 \times 10^{-11}$. What is the pH of saturated solution of magnesium hydroxide in 0.01 M HCl ?
5. The $\mathrm{K}_{\mathrm{a}}$ of formic acid is $1.8 \times 10^{-4}$. Suggest a means (concentrations of formic acid and sodium formate) to make a buffer solution with a pH of 4 .
6. Does 1 L of your proposed buffer system have the capacity to remain a buffer if you add 10 mL of 1 M HCl ?

7 If you mix the following four solutions what is the pH of the final solution. 100 mL of $1 \mathrm{M} \mathrm{HCl}, 200 \mathrm{~mL}$ of $1 \mathrm{M} \mathrm{NaOH}, 100 \mathrm{~mL}$ of 0.4 M HF , and 400 mL of 0.1 M NaF . The $\mathrm{K}_{\mathrm{a}}$ for HF is $7.2 \times 10^{-4}$.
8. You attempt to dissolve 0.25 g of $\mathrm{PbCl}_{2}$ in 50 mL of water. You find that all but 0.03 g dissolves.

What is solubility of $\mathrm{PbCl}_{2}$ in water in units of $\mathrm{g} \mathrm{L}^{-1}$ ?
What is the solubility product for $\mathrm{PbCl}_{2}$ ?
